

## VIP Signal Distributor

A versatile signal distributor that splits, isolates, and amplifies the signal from a VIP Drive 43s to video panels, offering flexible output as either a 4-way dual-channel or 8-way single-channel splitter.

Perfect for managing signal distribution and ensuring signal integrity across large or complex video wall configurations in touring, production, and installation environments.

- Configures as a dual-channel 4-way or single-channel 8-way splitter for versatile setups.
- Amplifies video signals for long cable runs, maintaining quality over 100 meters.
- Link multiple units to easily scale signal distribution for larger installations.
- Features locking RJ45 connectors for secure and reliable signal connections.
- Provides signal isolation between outputs to protect against electrical issues.
- Built with a rugged chassis suitable for demanding touring and production environments.
